

Task 1: Responsive Portfolio Website

Candidate Name	Danish Qureshi
Candidate ID	BS/REG/119497
Role	Frontend Developer Intern
Task	Task 1 — Responsive Portfolio Website
Submission Date	May 2026

Objective

Build a fully responsive personal portfolio website that showcases skills, projects, and contact information. The website adapts seamlessly across desktop, tablet, and mobile screen sizes using modern CSS techniques including Flexbox, Grid, and Media Queries.

Technologies Used

Technology	Purpose
Next.js 14	React framework for building the portfolio
TypeScript	Type-safe JavaScript for all components
Tailwind CSS	Utility-first CSS for responsive styling
Vercel	Deployment and hosting platform
Git / GitHub	Version control and source code management

Key Features

- Fully responsive layout — works on mobile, tablet, and desktop
- Hamburger navigation menu on mobile devices
- Hero section with CTA buttons (View Projects, Download Resume, Contact Me)
- About Me section with professional bio
- Skills & Tools section with categorized badge layout (Frontend, Database, Tools)
- Projects showcase and Contact section
- Smooth scroll navigation

Responsive Design Implementation

The portfolio uses Tailwind CSS utility classes to implement a mobile-first responsive design. Key responsive features include: hamburger menu replacing the desktop navbar on small screens, single-column layout on mobile switching to multi-column on larger screens, fluid typography scaling, and touch-friendly button sizes. The layout was tested across Chrome DevTools device emulators for iPhone SE, Pixel 7, and iPad.
